AgShare.Today:

Providing BMGF-funded projects with the tools and training they need to help them work more efficiently and share their results widely

AgShare TODAY
RESEARCH COORDINATION PLATFORM

What is **AgShare.Today**?

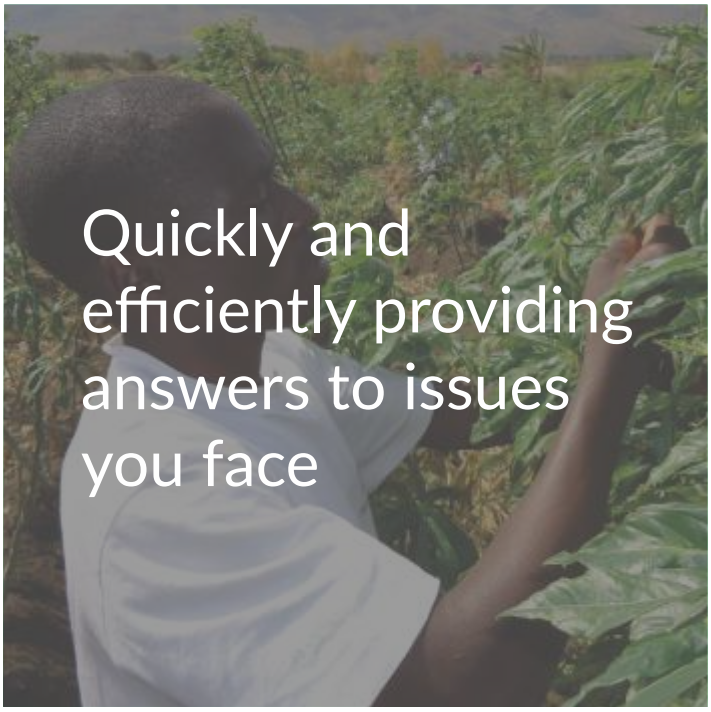
Funded by the Bill & Melinda Gates Foundation (BMGF), AgShare.Today provides tools and solutions to help other Gates Foundation projects work more efficiently and share their results more widely.

AgShare approaches its goals from a range of directions. Examples include providing both technical solutions (such as cloud-based data visualisation and data management services) and training in journal article writing, presentation of results, and use of statistics.

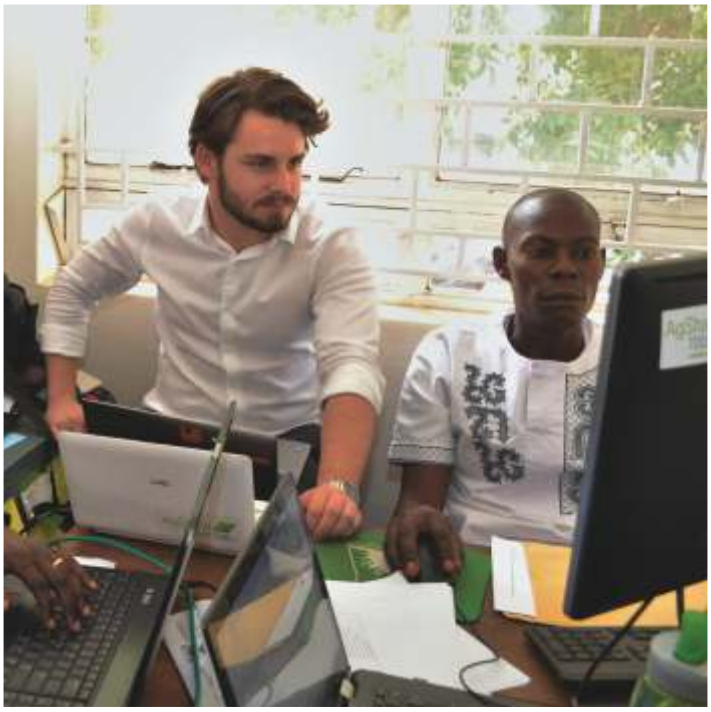
AgShare also offers its members access to a wide variety of resources – ranging from online libraries and discussion groups, to secure cloud-based work areas and tailored databases.

AgShare even provides one-to-one scientific writing and editing support to help researchers write articles suitable for publication in international peer reviewed journals.

An expert team
to help with
your project
implementation
when you need it



Quickly and
efficiently providing
answers to issues
you face



How can **AgShare.Today** help you?

AgShare.Today aims to make project management, data collection and the communication of results more efficient, so that researchers can devote themselves full-time to their important research. We work between projects to deliver support and services when they need it most – always available but never intrusive. AgShare surveys the needs of many projects to standardise and share knowledge, proactively seeking out ways to improve project processes before issues arise.

> *"No amount of words can describe your contributions for the smooth running of our BMGF-funded project. We forever remain grateful"*

What help does **AgShare.Today** provide?

AgShare.Today provides a large range of valuable tools and services free of charge to BMGF-funded projects. Examples include:

Tools – these range from a dedicated online platform containing shared resources (such as a primers database and library), to automatic data back-up services, data visualisation tools and mobile survey app development and support

Training – courses given range from science writing (to speed up journal article submission) and one-to-one support in the use of statistics, to project management training to boost project efficiency

Publications – direct publications support includes one-to-one mentoring by experienced science writers to help authors plan and write their journal articles. We also help authors submit through the Foundation's Chronos service – so that their open-access fees are paid

Information exchange – support here aims to increase your project resources by encouraging exchange of information across different projects in the AgShare network.
